

**Don Bosco Institute of Technology, Kurla**  
**Academic Year 2024-25**

**EXPERIMENT NO. 5**

**SEMESTER: V**

**DATE OF PERFORMANCE: 28<sup>th</sup> August 2024**

**SUBJECT: CN Lab**

**DATE OF SUBMISSION: 01<sup>st</sup> September 2024**

**NAME OF THE STUDENT: David James Eluvathingal**

**ROLL NO.: 22**

<b>AIM</b>	Study a simulation tool like NS2 to understand how network simulation tools function.
<b>LEARNING OBJECTIVE</b>	The student will understand the basics of tool NS2 and NAM animation tool.
<b>LEARNING OUTCOME</b>	The Students will be able to study set up of an NS2 Simulator and functions of packet tracer.
<b>COURSE OUTCOME</b>	<b>CSL 502.2:</b> Gather information regarding network simulator tool e.g. NS2 and summarize its usage
<b>PROGRAM OUTCOME</b>	PO1,PO2,PO3,PO4,PO5,PO9,PO10,PSO1,PSO2,PSO3
<b>BLOOM'S TAXONOMY LEVEL</b>	Understand
<b>THEORY</b>	<p><u>NS2</u> is an open-source simulation tool that runs on Linux. It is a discrete eventsimulator targeted at networking research and provides substantial support for simulation of routing, multicast protocols and IP protocols, such as UDP, TCP, RTP and SRM over wired and wireless (local and satellite) networks. Namis a Tcl/TK based animation tool for viewing network simulation traces and real world packet traces. It supports topology layout, packet level animation, and various data inspection tools.</p> <p>Ns began as a variant of the REAL network simulator in 1989 and has evolved substantially over the past few years. In 1995 ns development was supported by DARPA through the VINT project at LBL, Xerox PARC, UCB, and USC/ISI. Currently ns development is support through DARPA with SAMAN and through NSF with CONSER, both in collaboration with other researchers including ACIRI. Ns has always included substantial contributions from other researchers, including wireless code from the UCB Daedelus and CMU Monarch projects and Sun Microsystems. For documentation on recent changes, see the version 2 change log.</p>

NS can be downloaded from the ns web site at <http://www.isi.edu/nsnam/ns/ns.html> and the download page <http://www.isi.edu/nsnam/ns/ns-tests.html>.

NS supports almost all variants of TCP, several forms of multicast, wired networking, several ad hoc routing protocols and propagation models (but not cellular phones), data diffusion, satellite, and other stuff. See the documentation (described above) for details, or download ns and look.

### What's Nam

Nam is a Tcl/Tk based animation tool for viewing network simulation traces and real world packet traces. It supports topology layout, packet level animation, and various data inspection tools. Nam began at LBL. It has evolved substantially over the past few years. The nam development effort was an ongoing collaboration with the VINT project.

## Nam: Network Animator

What can you do with these tools:

Create:

- Terrestrial, satellite and wireless networks with various routing algorithms (DV, LS, PIM-DM, PIM-SM, AODV, DSR).
- Traffic sources like web, ftp, telnet, cbr, stochastic traffic.
- Failures, including deterministic, probabilistic loss, link failure, etc.
- Various queuing disciplines (drop-tail, RED, FQ, SFQ, DRR, etc.) and QoS (e.g., IntServ and Diffserv).
